

SUSTAIN:

Adjusts compression ratio and increases SUSTAIN.

NOTE: Higher Sustain Settings will create noise when not playing

BLEND:

Adjusts mix of compressed and uncompressed signal. Full left for 50/50 blend, full right for full compression.

ATTACK / RELEASE:

Adjusts the attack and release for single coils or humbuckers.

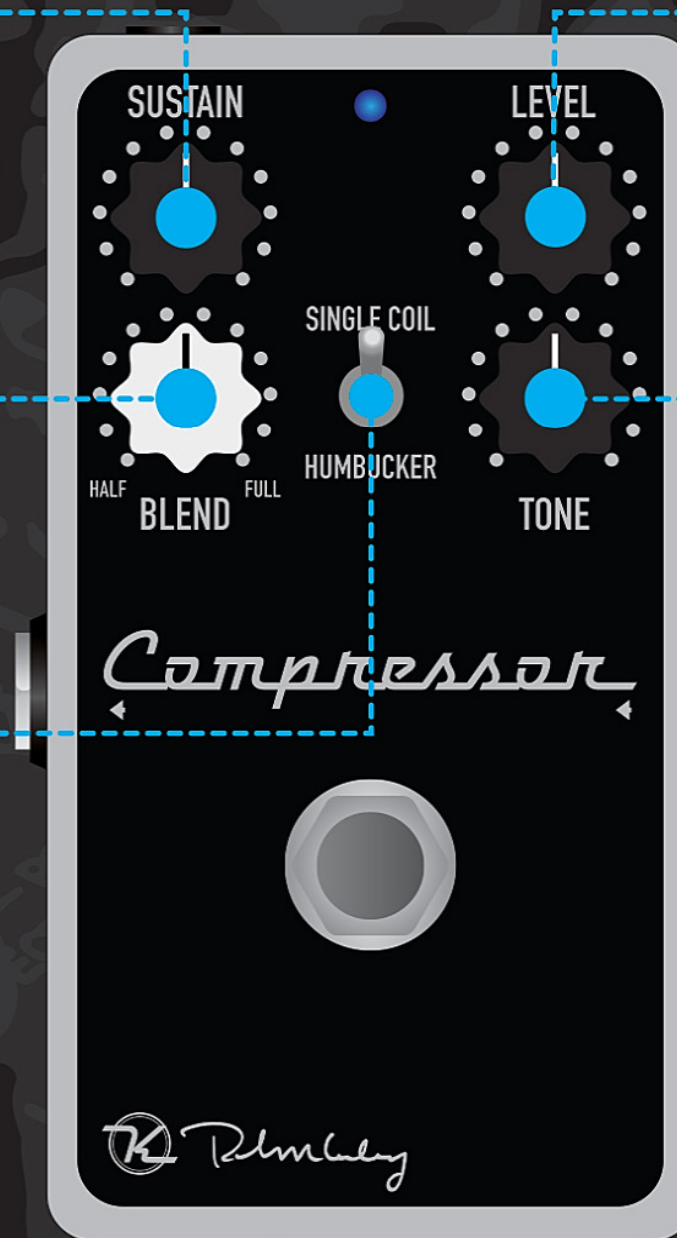

This can also be thought of as low output or high output on other instruments.

LEVEL:

Adjusts for gain lost to Compression or Blend. Set to unity or turn it up higher for a boost effect.

TONE:

Adjusts brightness of output. Turn right for bright.

Compressor Plus

You care deeply about getting the very best tone. That's why you're holding a Keeley Compressor. In your search to make better music you want an instrument that makes you sound smooth and polished, one that helps you sing with sustain, and one that lets each note come to life. Is there anything worse than a note that dies before its time? The sustain from a Keeley Compressor blossoms and blooms like tube amp compression. The Compressor Plus has the precision and tone of a studio rack mount JFET compressor. Tired of having your tone buried like a blanket over your speaker? The Plus offers you a blend that gives you the transparency and freedom of the world's greatest levelers and limiters. Tens of thousands of players have trusted Keeley Compressors for articulate expressive sustain. I'm sure you'll enjoy years of playing and performing with the new Keeley Compressor Plus on your pedal board.
