

STONE BRAMBLE OVERDRIVE

BJF Series | Overdrive Pedal

Specifications

Input Impedance: 390k

Output Impedance: 50k

Power Supply: 9-18V center negative

Current Draw: 10.7mA

S/N: -90dB

Size: 47Wx100Dx48H mm

Weight: 160g

Bjorn's Description

The Stone Bramble Overdrive is another "flavor" that has descended from the original and successful Strawberry Red Overdrive pedal from One Control. Stone Bramble is a berry that grows in the north of Sweden and at one time was considered poisonous – however, with judicious use this berry has been found to actually be healthy and beneficial.

Take the original Strawberry Red Overdrive and add a little bit more sparkle and shimmer. There is a switchable mid-boost function that can accentuate the upper mids in just the right way. Or, one can switch this off for a more cutting and "edgy" overdrive tone.

So far, the Stone Bramble Overdrive has been a limited-edition pedal only found in Japan – but we are now releasing it to the world. Björn has said that this particular overdrive is his personal favorite from the Strawberry Red Overdrive family, and the most versatile. Here's your chance to grab this limited-edition pedal for yourself!
