

Forest for the Trees BM20-ULTRA™

Many of us remember fiddling with the tiny little DIP switches on one of the most famous analog amp modelers of all time. There was something so satisfying in the simplicity of crafting unique tones through a series of binary choices.

That feeling was the inspiration for the Forest For the Trees. It's a true Muff lover's dream: adjust the circuit at 20 different points, switch between germanium or silicon transistors, bypass the tone section completely, and so much more. There are literally millions of possible unique settings at your fingertips. Seriously; we checked the math!

The Forest For The Trees offers a near endless palette of possibilities at your fingertips. 100% analog in all ways. 100% fun for days. An invaluable tool on the stage or in the studio. Comes with suggested settings to capture various iconic muff era sounds.

Beyond fuzz

In order to truly understand all that is possible with the Forest For The Trees, we encourage you to download the manual and give it a read. You'll find suggestions, examples, and more.

This pedal is all about **you and your unique sound**. We know you'll enjoy the journey.

The Controls:

- VOLUME** Makes it louder or not so loud when ya turn it.
- TONE** Controls the sweep of the passive mid-notch
- DISTORTION** Makes things more.... Distorted!
- TONE BYPASS** Bypasses the passive tone stack in the circuit (expect a volume boost!)
- TRANS SELECT 1** Toggles between a germanium or silicon transistor
- TRANS SELECT 2** Toggles between a germanium or silicon transistor

Other Info:

- CURRENT DRAW** The FFTT will draw around 5.5mA
- POWER** This a center-**negative** 2.1mm barrel regulated power supply (typical guitar pedal power unit). Please use a supply intended for effects pedals.
There is no option for a 9V battery
- BYPASS** Effect on/off switching is done via a 100% mechanical 3PDT foot-switch, otherwise known as “true- bypass”
