

# The J Mascis Garbage Face™

*(This is a condensed description, full description is in the booklet that comes with your pedal)*

## WHAT IS THE GARBAGE FACE PEDAL??

Matthew Holl, the owner of Wren and Cuff has had a working relationship with J Mascis of Dinosaur Jr for many years now. Eventually Matthew approached J with the idea of doing a signature pedal made to sound like J's favorite vintage muff pedal combined with his favorite germanium treble-booster.

J's favorite Big Muff® is an early 70's "ram's head" that he purchased while on tour in 1987. Matthew and J worked together making sure the final unit was a dead on replica of his treasured pedal.

## Features:

- Left side is an accurate replica of J's 1970's era ram's head muff
- Two independent volume outputs which can be toggled via the center footswitch
- Right side features a replica of J's favorite treble boost
- Boost side features an option for treble or full range boost
- Comes with two official Dinosaur Jr picks
- Booklet featuring a brief history of the band, J, and his gear

## The Controls:

**VOLUME** Makes it louder or not so loud when ya turn it.

**TONE** Changes the position of the mid-notch in the EQ

**GAIN** Adds more distortion/fuzz

**VOLUME 2** Secondary volume control for the fuzz side of the pedal

**FULL/TREBLE TOGGLE** Toggles between a vintage treble boost circuit and a full range boost

**BOOST** Treble/full boost volume control

## Other Info:

**CURRENT DRAW** This pedal will draw around 5.5mA

**POWER** This pedal has **no** option for a battery. A center-**negative** 2.1mm barrel regulated power supply (typical guitar pedal power unit) must be used. Please use a power supply intended for effects pedals.

**BYPASS** Effect on/off switching is done via a 100% mechanical 3PDT foot-switch, otherwise known as “true- bypass”
